[Honey Food Market 2019](#)

Honey is a sweet food produced by bees foraging nectar from flowers. Honey bees convert nectar to honey through regurgitation and evaporation. The bees store the honey as a primary food source in wax honeycombs inside beehives.

The beekeepers extract the honey by removing the honey comb and then by crushing it or using a honey extractor. Honey bees form an important part of the food chain as they aid in pollination, which is required to support the food chain.

The increasing number of innovations in the process of honey harvesting will drive the growth prospects for the global honey food market until the end of 2023. The market is witnessing a high degree of innovations in the process of honey harvesting devised by the research and development divisions to improve and increase the quantity and quality of the final product harvested. Moreover, the increasing number of software to monitor the strength and health of hives using passive infrared sensors and allowing beekeepers to track, optimize hive productivity, hive health remotely, and security will propel the global honey food market's growth in the coming years.

The Americas dominated the market share during 2017 and will continue to dominate the market for the next four years. Some of the major factors responsible for the growth in the demand for honey in the Americas includes the growing awareness in terms of health benefits of honey and the increasing number of health-conscious people.
