Description

A smart commercial drone has a computer inside. They are easy to fly, maneuverable remotely, and contain sensor logic. Soon all smart drones will have computer driven collision avoidance technology making the flying more reliable. Remote operation occurs in the context of a workflow and sensors. Cameras are improving dramatically to permit management of video and picture taking that is realistic and detailed. Smart commercial drones are used for commercial application such as agriculture, government and entertainment.

Scope of the Report:

The Smart Drone Services industry concentration is relative high; there are many producers in this market, but DJI only take above 60% market share.

DJI focus on micro and mini products, its product mark a strong growth rate, even there are more and more new players entered into this market. Its market leadership is relatively stable due to the product performance and incomparable prices. The many other players have to adjust their market strategy, such as focus only one or two applications, or for the large and professional products.

The key consumption markets locate at developed countries. The North America takes the market share of 32%, followed by Europe with 30%. China's consumption market has a quicker growing speed of CAGR 73%.

We tend to believe this industry becomes more and more mature, and the consumption increasing rate will show a smooth curve.
