Description

Scope of the Report:

Increasing power consumption for industrial and commercial applications has built up a demand-supply gap in the power market. This gap is even more evident during the peak hours for electricity consumption. This has led to the development of power rental systems which are capable of providing temporary power during phases of the low power supply.

Increasing power demand, lack of grid stability & support and low electrification rates are the major driving factors of the power rental market in the utilities segment. Lacking of electricity access, aging T&D infrastructure are driving the UK market for power rental solutions. The rise in UK construction and infrastructural activities are driving the UK market for power rental solutions. Increasingly frequent business activities are also a stimulating factor.
