Educational software is computer software, the primary purpose of which is teaching or self-learning. Educational software is the developmental and non-developmental software which are specifically used for education. It also reflects on the technical and also instructional design for developing the courseware or educational application.
According to the statistics of the Ministry of Education, in 2009 there were 10.64 million primary and secondary full-time teachers and 179.40 million primary and secondary school students. Such a large number of primary and secondary students gave birth to a huge market demand. The potential market capacity is extremely large. While the ratio of investment in the education sector and the China whole GDP is only 4.15% (2014), which is about half the developed countries. Compared with India, Thailand and other developing countries, it is still a wide gap. Taking into account the great volume of China's economy and rapid growth in the future of China's GDP, there still have at least one time space for the development of expenditure on education.
The main procurement area of educational software are still concentrated in the information leading comparison of large and medium-sized cities. From the regional distribution of demand, East China, North China, South China is relatively strong, the western region is weak, and urban and rural differences are relatively large.
