[Automotive ABS and ESC Market 2019](#)

An anti-lock braking system or anti-skid braking system (ABS) is an automobile safety system that allows the wheels on a motor vehicle to maintain tractive contact with the road surface according to driver inputs while braking, preventing the wheels from locking up (ceasing rotation) and avoiding uncontrolled skidding. It is an automated system that uses the principles of threshold braking and cadence braking which were practiced by skillful drivers with previous generation braking systems. It does this at a much faster rate and with better control than many drivers could manage. Electronic stability control (ESC), also referred to as electronic stability program (ESP) or dynamic stability control (DSC), is a computerized technology that improves a vehicle's stability by detecting and reducing loss of traction (skidding).When ESC detects loss of steering control, it automatically applies the brakes to help "steer" the vehicle where the driver intends to go.

Among other regions, Europe market has the biggest share of global automotive ABS and ESC market, followed by North America market. But the latter region is projected to see a much higher CAGR during the forecast period.
