## Description:

Scrap consists of recyclable materials left over from product manufacturing and consumption, such as parts of vehicles, building supplies, and surplus materials. Unlike waste, scrap has monetary value, especially recovered metals, and non-metallic materials are also recovered for recycling.

Geographically, the Asian region is predicted to dominate the global market for steel scraps during the forecast period. The recent restriction on the export of nickel ore by the Indonesian government is a significant factor that impels market growth in this region during the forecast period.
