PUNE, INDIA, March 28, 2019  
/EINPresswire.com/ --

In manufacturing, computer numerical control or simply numerical control is the automated control of machining tools by means of a computer, in which a NC machine operates on a piece of material to transform it to precise specifications.

Increase in demand in mass production plants for various applications including electronic parts manufacturing, machining plastics, engraving steel, thermoforming, and machining graphite have fostered the adoption of CNC. In addition, the increase in production efficiency and better accuracy and precision of equipment in various sectors such as aerospace, automobile, healthcare, electronics, and industrial machinery are expected to drive the market growth. However, high cost of CNC machines with highly advanced software languages restrict the market growth. Innovative developments in technologies and machine tool equipment along with increase in number of application areas such as micro drilling, dispensing, dental, and rapid prototyping are expected to provide numerous opportunities for the growth and development of the CNC market.

The global [Computerized Numerical Control \(CNC\)](#) market is valued at xx million US\$ in 2018 is expected to reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2019-2025.
