Wiseguyreports.Com Adds "Advanced Distribution Management Systems (ADMS) -Market Demand, Growth, Opportunities and Analysis Of Top Key Player Forecast To 2024" To Its Research Database

An advanced distribution management system (ADMS) is the software platform that supports the full suite of distribution management and optimization. An ADMS includes functions that automate outage restoration and optimize the performance of the distribution grid. ADMS functions being developed for electric utilities include fault location, isolation and restoration; volt/volt-ampere reactive optimization; conservation through voltage reduction; peak demand management; and support for microgrids and electric vehicles.

The market size of ADMS has considerably grown over the past few years on the account of evolving smart grid and the emergence of technologies such as advanced metering infrastructure, outage management system, and energy management system. Rapid industrialization in emerging economies such as India and China has increased the demand for energy in these regions. Also, the demand for affordable and reliable energy has forced the utilities to upgrade to advanced technologies and enhance their electric and distribution network, thereby driving the adoption of ADMS.

In 2018, the global Advanced Distribution Management Systems (ADMS) market size was xx million US\$ and it is expected to reach xx million US\$ by the end of 2025, with a CAGR of xx% during 2019-2025.
