Gene A.I.dols Co., Ltd. will release Dapps game "Gene A.I.dols" open β soon in May 2019.

## □Gene A.I.dols Project□

Create your own pop star in the game "Gene A.I.dols " by combining the world's one and only appearance and voice. Appearance will be generated using AI-generated GAN (Generative adversarial network).

Vocal fold will be generated using Alt Inc.'s speaker adaptation technology. By breeding artificial genes of created pop star pairs, you can create a brand-new popstar's appearance and voice which passes on their intermediate genes.

In addition, this service enables you to not only generate appearance and voice from artificial gene but to the contrary, also enables you to create artificial gene-information from existing facial images and human voices. Further speaking, you can also create a brand-new pop star by breeding artificial gene generated from existing human and pop star made by A.I. .

Furthermore, your own pop star will be tokenized to ERC721 standard token and written on Ethereum smart contract which enables you to hand the pop star over to the third party through corresponding wallets. Looking ahead, we are also planning to provide services compatible with VR (virtual reality). By using vocal fold information of each pop stars and conversation engine written on artificial gene, having a chat with created pop stars through VR will also be realized in the near future.
