Listening to clients is extremely important. Incorporating their suggestions from time to time, according to the need of the applications and phase of the project lifecycle helps in checking bugs at an earlier stage and eases User Acceptance Testing before final delivery. It is as well important to suggest technologies to the client and come to a decision, before the implementation phase, in order to meet their needs in the best possible way. The ultimate application/website has to be feature-rich, secure to use and would enhance the user experience as they navigate through.

About ADA

A research firm, dedicated to fostering best talent and striving to match up service seekers with relevant service providers. They have been recognized for their rankings globally. They absorb and research all the critical details of the companies before listing. Their selection criteria range from checking companies if they follow each step of application development right from following customer requirements at every stage, till post-deployment support. It includes the complex data and back-end code to visual design and front-end support. They keep a check on firms if they are able to handle continuous iterations, maintenance and upgrades (if any) required by the web applications. They ensure that firms build the best website that satisfies the client's requirements and fulfills user's needs by making use of contemporary, industry technologies, delivering the product that lasts.
