

Pre-paid blockchain water billing system

EZPack and Nuhanse announcing their intention deploy a pre-paid water billing system based on wireless water meters managed on a blockchain platform.

TEL AVIV, NEW YORK, ISRAEL, May 8, 2019 /EINPresswire.com/ -- Tel Aviv, Israel May 8th, 2019; [EZPack](#)® Water Ltd., and [Nuhanse](#) Networks are pleased to announce their intention to develop and deploy a pre-paid water billing system based on wireless water meters managed on a blockchain platform.

The water App will first be rolled out in urban and rural areas in Africa. Nearly all developing countries have national water supply and sanitation policies, and all encourage private-sector participation to provide water supply systems, and reform of the service where current systems are vulnerable to resource misallocation. The result is a lack of investment in water infrastructure from corporations and governments, leaving many without water. This water App. will enable water to be provided to households and will incorporate micro-finance payment applications.

Efficiently allocating water to underserved urban and rural households is the incentive that led EZPack® Water Ltd., a veteran of the emergency water management sector, to lead the way with a prepaid water billing system. EZPack® is looking to partner with Nuhanse Network, a world leader in Distributed Ledger Governance software, creating a tamper resistant water payment system. By combining smart meters with smart contracts, their system guarantees that water is used by paying users, and the water providers receive their payments. As a consequence of the system, EZPack® will attract investment into African water infrastructure, positively impacting millions of lives.

EZPack® Water Ltd., is a private Israeli company manufacturing and marketing proprietary solutions for water storage, distribution and mobility. The company products are aimed to markets such as emergency, disaster relief, firefighting, military, construction and mining industry, agriculture, and a myriad of other applications.
