PUNE, MAHARASHTRA, INDIA, May 14, 2019 /EINPresswire.com/ -- Agriculture Equipment:

Executive Summary

With escalating demand for food owing to growing population inadequate arable land water scarcity and degradation of soil fertility the agriculture industry is facing concerns related to production. Due to industrialization more agriculture lands are used for commercial purposes resulting in population shift toward cities limited availability of labor and raised wages. To counter these concerns mechanization trend is increasing to improve the efficiency of farmland. The growth factors are a reduction in production time improved quality and cost saving. The bottom-up approach has been used to estimate the farm tractor market by power output. The country-level tractor sales numbers are multiplied by country-level penetration of each category of power output. The country-level market by volume is multiplied by the country-level average selling price of farm tractors with each category of power output to get the country-level market by value. The further addition of country-level to the regional level and then the summation of regional markets gives the farm tractor market by power output in value. A similar approach has been followed to derive the farm tractor market by drive type & combines market by application.
