## Description:

Blockchain as a Service (BaaS) is an offering that allows customers to leverage cloud-based solutions to build, host and use their own blockchain apps, smart contracts and functions on the blockchain while the cloud-based service provider manages all the necessary tasks and activities to keep the infrastructure agile and operational. It is an interesting development in the blockchain ecosystem that is indirectly aiding the blockchain adoption across businesses. It is based on, and works similar to, the concept of Software As A Service (SaaS) model. BaaS is when an external service provider sets up all the necessary "blockchain technology and infrastructure" for a customer for a fee. By paying for BaaS, a client pays the BaaS provider to set up and maintain blockchain connected nodes on their behalf. A BaaS provider handles the complex back-end for the client and their business.
