

# WHP Engineering Deploys TimeControl Timesheeting To Help Keep Up With Its Own Growth

*HMS Software and WHP Engineering released a case study describing how HMS Software's TimeControl system is helping improve efficiency at the engineering firm.*

MONTREAL, QUEBEC, CANADA, May 16, 2019 /EINPresswire.com/ -- HMS Software, the publisher of TimeControl, the world's most flexible multi-purpose timesheet has announced the release of a case study describing how WHP Engineering, a UK-based engineering company implemented TimeControl to improve operational efficiency in their organization.

We are delighted with the work we've done together with WHP in implementing TimeControl in their UK operation."

*Chris Vandersluis*

WHP Engineering is an engineering specialist which delivers precision engineered solutions for the biotechnology, pharmaceutical and other clean process manufacturing industries. It has grown more than 135%

since 2017.

"We are delighted with the work we've done together with WHP in implementing TimeControl in their UK operation," explains Chris Vandersluis, President of HMS Software. "In many ways our two firms are similar. We both strive for the most efficient solution to complex and unique challenges. In our case, being able to deploy TimeControl at WHP was a good fit for the business challenge they were facing."

Some of the factors that had WHP selecting TimeControl included its ability to integrate with both Oracle-Primavera® and Sage®. Other factors included the product having both a browser-based and mobile interface. This has allowed WHP to collect hours in a more user-friendly solution with much greater detail than before.

"The fact that I can see what projects people are spending their hours on and what they're delivering for those hours is crucial," explained John Wheeler, WHP's Engineering Manager. "If we hadn't made the change to TimeControl, we certainly wouldn't have the level of key business metrics that we're getting now. We're quickly realizing that we can do a lot more with our timekeeping data than we ever have."
