A Data Historian (also known as a Process Historian or Operational Historian) is a software program that records and retrieves production and process data by time; it stores the information in a time series database that can efficiently store data with minimal disk space and fast retrieval. Time series information is often displayed in a trend or as tabular data over a time range (ex. the last day, last 8 hours, last year).

A data historian could be applied independently in one or more areas, but it can really show its worth when applied across an entire facility, many facilities in a department, and across departments within an organization. One could discover that a production problem's root cause is insufficient brine supply to the production equipment or one could discover the 2 similar units produce significantly different results over time.

In 2018, the global Data Historian market size was xx million US\$ and it is expected to reach xx million US\$ by the end of 2025, with a CAGR of xx% during 2019-2025.
