

GiaX Wins Vodafone Deutschland 10GE Coax Overlay Deal

GiaX, a German technology startup bringing Innovation to coaxial networks, is proudly announcing a major customer win with Vodafone Deutschland.

ERLANGEN, GERMANY, May 21, 2019 /EINPresswire.com/ -- Vodafone Deutschland will be using the [GiaX](#) HeEOS solution for the deployment of its innovative GIGA HFC Cable Infrastructure solution, allowing Vodafone to increase the speed and efficiency of delivering its 1 Gbit/s services to their 12.6 million residential customers.

At GiaX we have developed the HeEOS solution to help Cable operators execute on the promise of Distributed Access Architecture (DAA) without the massive investments in extending the fiber network. How? By re-energizing the existing coax network, using it as a 10G Ethernet distribution network for DAA, preventing time and money spend digging fiber to re-segment service groups, providing a virtual node split solution that allows you to push the DAA remote device deeper into the network without the associated cost of digging fiber.

“

GiaX is proud to be working on the GIGA HFC project together with Vodafone Deutschland and WISI.”
Jörg Hellwig, CEO and founder of GiaX

The HeEOS BK product, a German specific version of the GiaX HeEOS solution, is being brought to market in

partnership with [WISI](#) Communications GmbH & Co. KG.

"Thanks to the technical solution from WISI and GiaX, we will be able to provide our customers with an upgrade of our high-performance cable network to gigabit speeds by 2021 in a very cost-effective and timely manner. What was important for our decision for WISI was that in addition to the cost savings provided by the upgrade, we could continue to use the existing infrastructure of the BK network" said Dr. Thomas Kühne, Head of Network Engineering, Fixed Access Network, at Vodafone Deutschland in a German press-release from WISI communications on the 21st of May.

"GiaX is proud to be working on the GIGA HFC project together with Vodafone Deutschland and WISI", said Jörg Hellwig, CEO and founder of GiaX. "The HeEOS product family, a GiaX innovation, allows cable operators such as Vodafone to re-use the existing coax network, re-energizing that network to offer standard based 10G Ethernet backhaul capabilities for deployment of Distributed Access Architectures such as Remote Phy.
