EMC 3.2 Release Highlights...

This EMC release focuses on improving online shopping experience from a logistics standpoint. Now provide your B2B customers the online ordering experience that is in trend. Display different product pricing based on customer group (like retailers and wholesalers) and product quantity (tier pricing). Customer can find nearby stores from their profile page via navigator through GPS based store selector. You may now restrict customer orders from a particular location.

This release includes secured user registration and login via OTP. Create your own delivery slots based on user location such as area, state, and zip code. Map timings for delivery slots to allow the user to choose as per their preference. Your customers can now input their order delivery instructions. Pay for failed orders feature allows your customers to fulfill their orders for pending or canceled orders. Learn more about your customers through the order feedback/complaints feature.

EMC Core Capabilities...

Elite mCommerce gives retailers an opportunity to build native eCommerce apps - on popular eCommerce platforms. Push notification, seamless data synchronization from your eCommerce store to your mobile app, multi-lingual support, unlimited themes and layouts, flexible payment

methods through all popular and secured payment options, best checkout experience through reward options, and omnichannel interaction - text message, call and email are some of the features that engage users at all levels and increase repeat users.

Some of EMC's value-adding features that contribute to the shifting trends of online shoppers from the web to mobile apps are - Deep linking, Zopim chat integration, App analytics with Google, Customer support - call back feature and App size optimization - facilitating faster app loading and user downloads.

Our mobile app development experts have left no stone unturned with EMC 3.2 to offer you all the functionalities to make your mobile app as an attractive destination for all your users.
