

After the successful Offensive Security Conference Typhooncon, Beyond Security is Geared up for the next one in 2020.

SAN JOSE, CALIFORNIA, UNITED STATES, June 25, 2019 /EINPresswire.com/ -- [Beyond Security](#), a leading provider for automated security testing solutions including vulnerability management had recently hosted the first ever all offensive security conference in Seoul, South Korea this June and it had been a tremendous success.

Beyond Security Logo

With one hundred percent attendance, this event focused on highly technical offensive security topics such as vulnerability discovery, advanced exploitation techniques and reverse engineering that included an impressive line of keynote speakers as well as training workshops.

"It goes without saying that a conference is only as great as its audience. We had a total of 100 attendees, which meant we were completely sold out. This incredible participation showed great support from both the local and international security communities" said Noam Rathaus, Co-Founder and CTO of Beyond Security. "We are gearing up for an even bigger event in June 2020 following the success of this year's [Typhooncon](#)" he also added.

In addition, a 0-day vulnerability was disclosed during the conference, allowing attacking iPhones via a previously undisclosed attacks and gaining full access to an iPhone remotely. Formerly known as Hack2Win Extreme, Beyond Security's popular hacking competition had also taken place with a new name: [TyphoonPwn](#). Winners of the competition were awarded cash prizes along with the recognition within the security arena.

"We had the privilege to have three very talented finalists in our TyphoonPwn contest - with one taking home a prize of \$60,000, while the remaining two will take aim at winning additional prizes in the upcoming days through our SSD Secure Disclosure program" said Aviram Jenik, CEO and Co-Founder of Beyond Security. "We designed the competition to help improve the security landscape of software and devices, while responsibly disclosing vulnerabilities to the vendors. This makes it a unique opportunity for participants worldwide to share their knowledge and get noticed" he stated.
