Materials that have properties of an insulator as well as a conductor are called semiconductors. They are commonly found in almost all electronic devices. Some of the materials semiconductors are derived by include Germanium, selenium, and silicon. Silicon is considered to be the best semiconductor material, and hence, it is used in most semiconductors used in computer and electronic components. The semiconductor industry is growing by leaps and bound due to the growing demand for consumer electronic devices. Constant advances in technology and high adoption of automation in the manufacturing process are key drivers behind the growth of the industry. Rising investments and expenditures put in the R&D activities for the development of new products attribute to the thriving success of semiconductors.

Increasing usage of smartphones and tablets is driving the demand for semiconductors. Growing adoption of safety systems in the assembly line in the automobile industry has further provided impetus to the growth of the semiconductors. On the other hand, changing technological environment, government regulations to promote the use of eco-friendly products, increasing e-wastage along with the fluctuations in exchange rates and volatility are posing challenges to the growth of the semiconductors industry.
