

NTTC Surgery Center Pioneers Robotic Total Knee Replacement

Innovative surgery enables patients to leave clinic same day.

MESQUITE, TX, USA, July 8, 2019 /EINPresswire.com/ -- [NTTC Surgery Center](#) is pleased to announce they are pioneers for an innovative new surgery – Robotic Total Knee Replacement.

The Robotic Total Knee Replacement surgery utilises X rays and scans to build a virtual model of a patient's knee. Once the model has been built, highly skilled surgeons then use a robotic arm to ensure precise placement of the knee components.

“Our innovative knee replacement surgery enables most patients to check-in in the morning, and be back at home by the afternoon,” says Kishan Kikkeri, PR Director of NTTC Surgery Center. “It was imperative for us to develop a surgery that would not only be safe and cost-effective for patients, but make them feel more comfortable and respected as well.”

NTTC Surgery Center's Robotic Total Knee Replacement surgery provides clients with a host of benefits they wouldn't typically receive in a traditional hospital. These benefits include:

“

Our innovative knee replacement surgery enables most patients to check-in in the morning, and be back at home by the afternoon.”

Kishan Kikkeri

- No overnight hospital stays
- Lowered hospital acquired infection rates
- Flat rate and highly competitive pricing
- Innovative outpatient surgical method with state-of-the-art technologies
- Decreased wait times
- Personalised healthcare
- Payment plans
- And so much more!

“To be one of the first clinics in the Dallas Metroplex to offer robotic total knee replacement surgery is something we are very proud of,” states Kikkeri. “We look forward to pioneering additional advances in the medical field in the future, too.”
