Although access to technology and related electronic content has substantially transformed the lives of many young people in developed economies, this is not always the scenario for those in less developed nations. Access to ICTs such as mobile phones, the internet, and computers, specifically broadband, poses a challenge for youth in the developing world. Additionally, the cost of ICT access (Internet and mobile phones) is way higher as a share of per capita income in these predominantly disadvantaged economies. The challenge is gathering together all relevant stakeholders, including civil society, private sector, and governments. The purpose is to encourage them to work together to extend an environment that encourages the progress of youth and allows them to apprehend their potential in the information society. ICTs exceed borders improving the communication between young people from every corner of the globe, assisting in the advancement of mutual understanding and dialogue. It becomes imperative then that international collaboration regarding the transference of technology is adopted.
