The report profiles the following companies, which includes BASF SE, Incotec Group BV, Bayer Crop science AG, E.I. Dupont De Nemours and Company, Monsanto Company, Nufarm Limited, Sumitomo Chemical Co., Ltd, Syngenta AG, The Dow Chemical Company, and Platform Speciality Products Corporation. Syngenta, Bayer, BASF, and Monsanto are some of the major participants in the global market taking 82% of the overall market share. Other notable players include Nufarm, Dupont, Incotec, Sumitomo.

The assessment of the market depends heavily on a close study of macroeconomic and microeconomic factors that have the potential to set the global Seed Treatment market on a growth track or steer it away towards loss. At the same time, close inspection of the demographic changes has been done to understand the real-time market scenario. This extensive study helps in getting close to several segments of the market, which can be explored by market players for better gains in the coming years. The study also brings out growth pockets with potentials to take the market forward and optimally using resources. This also eases the path of garnering accolades from different quarters.

The report covers the factors impacting the market, Porter 5 Forces, Market Share Analysis, Price trend analysis, Product Benchmarking, and company profiles. Seed Treatment Market is segmented by origin such as Chemical Seed Treatment and Bio-Chemical Seed Treatment. Further, the market is segmented based on the Application Method such as Seed Coating, Seed Pelleting, and Seed Dressing. In addition, the market is also classified based on function such as Crop protection and Seed Enhancement. The market is further classified by crops, such as fruits & Vegetables, Turf & Ornamental, Grains & Cereals, Oil crops & Pulses, and others. The report segments the geographies by regions, which include North America, South America, Europe, Asia Pacific and RoW.

The vulnerability of seeds to various diseases, pests, unfamiliar weather conditions is raising the demand for the seed treatment, which helps the plants to overcome the pre and post-emergence threats. Seed treatment involves the application of chemical or biological substances to control disease organisms, insects, or other pests.

The market is primarily classified based on crops namely, corn, Soybeans, Wheat, Canola, Cotton, and others. Corn takes a major share in the seed treatment market with 34% market share followed by Soybeans and Wheat with 24% and 23% market share respectively. Other crops include Canola, Cotton, Rice, Sunflower, Potatoes and sugar beets.

Most of the seed treatments are applied to true seeds, such as corn, wheat, or soybean, which have a seed coat surrounding an embryo. However, some seed treatments can be applied to vegetative propagation materials, such as bulbs, corms, or tubers (such as potato seed pieces). However, the global Seed Treatment market is a fragmented one as it is riddled with the presence of several market titans and new entrants. New entrants are joining the market all the time to make the field more competitive. Their strategic moves often include merger, acquisition, collaboration, product launch, innovation, and other methods. The research also keeps an eye on the geographical improvements and charts trends that can impact the market in the coming years.
