Method of Research:

Cutting edge algorithms and research methodologies are leveraged for the extrapolation of market shifts. A detailed research method (including both primary & secondary) has been undertaken for the collection of data. The primary sources include interviews with top-level executives across the value chain (CEOs, VPs, MDs, etc.), surveys, questionnaires, etc. And, the secondary sources referred to are SEC filings, whitepaper references, published reports, governments documents, etc. The collected data is passed through a multi-layer verification process for assuring the quality of the insight offered. Top-down and bottom-up approaches are utilized for ensuring the authenticity and credibility of the valuations of the markets and segments.

Value-based care is gaining momentum with an increasing focus on outcomes-based care. This is expected to give a boost to the risk-sharing attitude in solution contracting between drug/device original equipment manufacturers (OEMs) and providers, accelerating the business value in the process. Other than this, access to cost-sensitive and quality care will be critical agendas for medical professionals in the regions of Central, and Eastern Europe, Africa, and Asia. With the lines between IT, retail, and healthcare industries fading, Apple, Google, Amazon, and Facebook in the West, and Tencent, Ali Health and Baidu in the East could expect to lead the individual healthcare space.

Social, demographic, as well as cultural changes, are prompting healthcare providers to be more affordable, responsive, and accessible. As a consequence, healthcare organizations are now depending on technology more than ever in a bid to achieve clinical as well as business objectives.

The healthcare space calls for integration. To elaborate, hospital networks run almost 300 applications. Patient information is spread across different systems in private and public healthcare institutes, proving to be complicated and costly for healthcare professionals while sharing vital clinical, medical, and patient information.

Treatment of rare, as well as complex diseases, is noting a radical shift from patient engagement to patient-centricity. The patient-centricity approach involves developing a basically new value proposition for each patient, which would elevate therapeutic success rates, patient compliance, and treatment adherence. The past few years observed a rise in the adoption of strategic changes to treat rare and complex diseases. Additionally, the personalized medicine aspect is presumed to offer a higher patient outcome for diseases such as diabetes, Alzheimer's, and cancer; diseases that are caused due to an amalgamation of environmental and genetic factors.
