

## Tooth Regeneration Market 2019- Global Industry Analysis, By Key Players, Segmentation, Trends and Forecast By 2026

PUNE, MAHARASHTRA, INDIA, July 18, 2019 /EINPresswire.com/ -- Summary: A new market study, titled "Discover <u>Global Tooth Regeneration Market</u> Upcoming Trends, Growth Drivers and Challenges" has been featured on WiseGuyReports. Introduction

Global Tooth Regeneration Market

With an extensive experience to back our proficiency and expertise in market analysis, we perform the most in-depth research to curate an accurate projection of the said market. The global Tooth Regeneration Market report dives deep into the market and garners the slimmest of information to provide the most comprehensive findings and insights. We thoroughly look at the various trends and developments in the industry to identify the factors aiding the growth of the market. The research process we employ is designed in a manner to offer a balanced viewpoint over the global Tooth Regeneration Market and provide stakeholders and industry participants with informed decisions.

Key players are adopting strategies such as mergers and acquisitions, partnerships, and regional expansion to stand out as strong competitors in the market. Regulatory approvals along with increased focus on R&D are other ways the leading players improve their market presence. Global Tooth Regeneration Market – Market Dynamics

The global tooth regeneration market is primarily driven by the high prevalence of the dental problems worldwide along with the research and development activities towards novel techniques for tooth loss problems. According to The Lancet's Global Burden of Disease (GBD) study 2015, 2.3 billion people worldwide suffer from dental caries (cavities) in their permanent teeth. According to the World Health Organization, Dental caries is the most widespread noncommunicable disease, ranking first for the decay of permanent teeth (2.3 billion people) and 12th for deciduous teeth (560 million children). Additionally, other factors boosting the market are favorable reimbursement policies and development of innovative technologies such as guided tissue regeneration developed recently as a novel periodontal therapy, allowing the regeneration of periodontal tissue without the use of cells or growth factors. Furthermore, these tooth regeneration technologies have substantial benefits over the other alternatives. However, the high cost of the procedures and regulatory approval issues may hinder the market progress over the forecast period.

Global Tooth Regeneration Market – Segment Analysis

By Application, the global tooth regeneration market is segmented into Enamel, Dentin, and Pulp. The dentin share accounts for a significant market share of the tooth regeneration owing it to the growing prevalence of dental surgery and the increasing demand for tooth regeneration in cosmetic surgery. The enamel share is the fastest growing due to the rising incidents of dental caries. The Global Burden of Disease Study 2016 estimated that oral diseases affected half of the world's population (3.58 billion people) with dental caries (tooth decay) in permanent teeth being the most prevalent condition assessed. The pulp share is expected to show significant market growth owing to the rising prevalence of periodontal disease. According to the World Health Organization, Severe periodontal (gum) disease was estimated to be the 11th most prevalent

disease globally.

By Demographics, the global tooth regeneration market is segmented into Geriatrics, Middle Aged, Adult, and others. Geriatric segment holds the dominant market segment. According to the National Institutes of Health (NIH), 17.20% of seniors aged 65 and over have periodontal disease, and 10.58% of seniors 65 and over have moderate or severe periodontal disease. The geriatric population has an average of 18.9 remaining teeth. Around 23% of the geriatric population have no teeth, creating a favorable market scenario for industry players. Global Tooth Regeneration Market– Geographical Analysis

North America holds the dominant share of the global Tooth Regeneration market, and it is primarily attributed to factors such as due to an increase in demand for dental services and stem cell research. According to the American Dental Association, the total dental expenditures in the U.S. was \$124B in 2016. This was a 3.3% increase from 2015. According to recent findings from the Centers for Disease Control and Prevention (CDC), half of Americans aged 30 or older have periodontitis, the more advanced form of periodontal disease. This equals approximately 64.7 million Americans. Moreover, its broad base of the patient population and the established healthcare infrastructure, rising disposable income, and higher investment in R&D activities contribute to the growth of North America's share.
