PUNE, MAHARASTRA, INDIA, August 16, 2019 /EINPresswire.com/ -- [Die Casting Market](#)

Casting is a process, in which the liquid metal is poured into a mold that contains a hollow cavity of the desired shape. It is then allowed to solidify and is removed from the mold. Casting materials are usually metals or cold setting materials like epoxy, plaster, or clay that cure when mixed with other components. Casting helps in making complex shapes that are otherwise difficult to make by using other processes. Die casting is a process that can manufacture geometrically complex shaped metal parts using reusable molds (known as dies). Automotive manufacturers are encouraged to use lightweight metals for producing parts of an automobile due to various government regulations related to vehicle emission standards.
