three is going to revolutionize industries. The current developments in the information and communication technology have raised eyebrows as its pervasive nature has made an indelible mark already. Stress on the unified communications is pushing the global information technology industry forward. It gets better with the inclusion of telecommunications. Its works regarding enabling users to access data, storage of it, transmitting and manipulating also requires others prominent layers like storage, enterprise software, middleware, and audiovisual systems.

Sound working on it starts from a single cabling or link system that threads audiovisual, telephone networks, and computer networks. This cuts down the cost remarkably which is also a major market factor. However, the industry is still evolving and can transform other industries on its way ahead. ITC has at its core internet-enables sphere and mobile, wireless ones as well. Traditional technologies such as landline telephone, radio, broadcast on television are also playing integral roles. But two latest technologies artificial intelligence (AI) and robotics are pushing the market forward. The growth has been further cushioned by the integration of smartphones.
