

# Solar Vehicles Market Size, Trend, Segmentation, Growth And Opportunities Forecast To 2025

---

*This report covers market characteristics, size and growth, segmentation, regional breakdowns, competitive landscape, market shares, trends and strategies*

PUNE, INDIA, August 27, 2019 /EINPresswire.com/ -- [Solar vehicles](#) rely on photovoltaic cells to harness solar energy to create electrical energy that is stored in batteries to either fully power or complement the vehicle's propulsion. The ones that solely rely on photovoltaic cells to power the vehicle are called Battery Electric Vehicles (BEV), while those that employ an internal combustion engine along with solar charged battery are called Hybrid Electric Vehicle (HEV). Until a few years ago, solar powered vehicles were considered to be impractical, mainly due to inefficient photovoltaic cells and exorbitant pricing of solar panels.

In the recent past though, the solar vehicles market has gained major impetus for growth from various governments across the globe, especially in emerging economies. This is part of the global initiative to reduce carbon footprint and adopt electric vehicles. For instance, the Indian government's Union Budget 2019 made special provisions for major tax rebate on interest paid on loans to purchase electric vehicles. This creates a highly conducive environment for growth of the overall electric vehicles segment in one of the fastest growing markets in the world, in turn fuelling growth of the solar vehicles market. Moreover, drastic reduction in prices of photovoltaic cells, various government subsidies, and rapid improvements in solar power technology are further driving adoption of solar powered vehicles.

Market Analysis by Players:

Lightyear  
Volkswagen  
Toyota  
Nissan  
Ford  
General Motors

Mahindra & Mahindra  
Sono Motors  
Hanergy Thin Film Power Group

## Segmentation

The global solar vehicles market has been categorized on the basis of the following to provide a comprehensive understanding of market dynamics, current and future trends, and other factors influencing the market:

### Product Type

Battery Electric Vehicle (BEV)

Hybrid Electric Vehicle (HEV)

The hybrid electric vehicle segment dominates the market, as solar cells currently being mass produced aren't very efficient.

### Application

Passenger Car  
Commercial Vehicle

Currently, most true solar powered vehicles are mainly in the prototype stage and assist in functions of vehicles, rather than power the entire vehicle.

### Regional Segmentation

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Spain

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

North America and Europe are the largest markets for solar vehicles. Asia Pacific is fast emerging as the most lucrative market for solar vehicles, given favourable government regulations promoting electric vehicles in the China and India. Major vehicle manufacturers such as Ford and Audi have announced plans to integrate solar panels in their future generations of electric and hybrid vehicles. Hyundai recently launched its Sonata car with a solar panel. This, however, can only provide enough power for a little over 2 miles on a single 'day out in the sun.' The technology is far from perfect, but given various favourable government regulations and

increasing investment in R&D by big players should pave the way for efficient solar cars in future. The market is still very much in the nascent stage, and is expected to witness exponential growth in the not-so-distant future, given the rising global effort towards moving away from using fossil fuels.
