

FutureAI Startup Formed

"Brain Simulator II" Software & Will Computers Revolt? Book are keystones of new company

WASHINGTON, DISTRICT OF COLUMBIA, UNITED STATES, August 28, 2019 /EINPresswire.com/ --

FutureAI.guru, an Artificial General Intelligence company was announced

today by the Founder/CEO, an AI pioneer and successful entrepreneur, Charles J. Simon. Mr. Simon is noted for two AI systems and two generations of Computer-Aided Design (CAD) with write-ups in Newsweek and other well-known media, along with co-founding several pioneering technology companies in Silicon Valley. Privately funded, the new company's goal is to create and promote Artificial General Intelligence ("AGI"), an extension of AI intended to create systems on a par with human abilities.

The "Brain Simulator II" introduces an open-source software project for creating end-to-end AGI. This product marries the fields of AI and neuroscience to intrigue the layman and advance the field. The detailed feature set will be announced shortly with an initial software release before the end of 2019.

Will Computers Revolt? the well-reviewed companion book, details the future of artificial intelligence in an easy-to-read format of what and how humanity should prepare and gives an overview of the software project architecture. See book reviews:

As the great physicist Stephen Hawking said, "All of us...should ask ourselves what we can do now to improve the chances of reaping the benefits of future AI and avoiding the risks."

In the exploding industry of intelligent computers, the march of technology is leading to computers with more processing power than the human brain. This technology is inevitable, and the decisions made in the industry today will impact the future of humankind.

"Over the next decades, AI innovation will continue at breakneck speeds. Computer performance, robotics, software development efficiency, and the resulting systems will lead to staggering advances."—Charles J. Simon of FutureAI in CEOWorld Magazine
