Description: -

The global packaging industry is moving towards a new trend and players are replacing cellophane, waxing paper, and aluminum foils with BOPP films. This trend is expected to gain traction in the coming years owing to the fact that BOPP films are more flexible and also facilitate faster packaging with advanced sealing properties as compared to other packaging materials. This has impelled manufacturers to come up with new techniques pertaining to the production of BOPP films in order to cater to the demand of various industries.

BOPP films have even lower density than Polypropylene. The low density leads to higher yield than films of other plastics. This permits BOPP films to be more cost effective than substitutes. Additionally, the rising demand for an enhanced shelf life of food products has resulted in a greater demand for high moisture barriers in packaging films. This is further projected to boost sales of BOPP films for packaging in the coming years.

Scope of the Report:

Regions such as Western Europe and North America embody the mature markets for BOPP packaging films. Nevertheless, the global market has been perceiving outstanding growth in emerging economies such as China and India fueled by the expansion of the flexible packaging industry in these countries. Moreover, other Asian countries such as Vietnam and Myanmar have been experiencing strong growth in their flexible packaging industries. This is likely to facilitate

the growth of the Asia Pacific BOPP films for packaging market over the course of the forecast period. The rising preference for flexible packaging solutions can be attributed to the growing desire for convenience packaging among several industries.
