## About CBD

Cannabidiol, more commonly known as CBD, is all-natural and is extracted directly from the hemp variety of the cannabis plant. CBD is one of more than 113 beneficial cannabinoids that the plant produces. CBD interacts directly with the endocannabinoid system (ECS) already present in our bodies. Mammals, including both people and pets, have an ECS. This ECS has a number of receptors that help regulate important bodily functions like a neurotransmitter, hormone secretion, temperature, and metabolism, as well as controlling inflammation, to name only a few. CBD essentially benefits the body by acting as a natural booster to the functions that the ECS is performing. CBD is safe, non-addictive, has relatively few side effects and does not require any special license to purchase. CBD may help with any number of health and wellness issues and new benefits are being discovered continuously.
