The consumer goods sector is likely to focus on environmental viability in a major way in the coming years. The environmental viability of consumer goods, including the environmental damage caused during the manufacturing of these items as well as the processes and challenges regarding recycling and reuse, has traditionally held low importance for the industry, as major players have focused on ensuring the success of their bottom lines. The use of chlorofluorocarbons in refrigeration units is a widely known case of the consumer goods sector inadvertently, but significantly, contributing to environmental degradation and damage. Stringent policies can encourage the manufacture of convenience goods with minimal environmental damage.
