

# Ipro Announces Major Performance and Productivity Gains to its Best-In-Class Processing Engine, eCapture

*Already hailed as best-in-class for handling large, complex data sets with outstanding speed & quality, Ipro continues to innovate & improve eCapture*

TEMPE, ARIZONA, UNITED STATES, September 16, 2019 / EINPresswire.com/ -- Ipro Tech, LLC, a global leader in eDiscovery and Trial software technology, announces major performance and productivity gains to its best-in-class processing engine, eCapture® by Ipro.

Over the last four years, Ipro has been updating its industry-leading processing capabilities based on the foundation of eCapture. It is the backbone processing engine of the Ipro for enterprise solution. Ipro's new streaming technology has automated the entire eDiscovery process from the upload of data through Production into ECA or Review. Integrating with Ipro for enterprise's self-service module allows custodians to upload documents without needing direct access to the controller or job queue. The automation allows customers to kick off a job and leave the office knowing that the case is rapidly moving forward.

The quality and the amount of processing options to handle complex data types truly sets eCapture apart from all other competition. This includes the QC Module, which is a feature-rich quality control module allowing customers to filter and find flagged documents, validate processed data, and easily correct issues.

While already hailed as best-in-class by industry analysts and users for its ability to take control over large, complex data sets with outstanding speed and unparalleled quality, Ipro continues to innovate and dramatically improve eCapture, creating major performance and productivity gains in the software, including:

- Unlimited extraction of meta-data fields
- Increases in overall processing speed, up to 40%
- Report generation speed performance gains of up to 95% on SSDs
- Up to 70% efficiencies in CPU usage
- Improved processing of new and complex file types
- Superior image and production quality, including the latest MS Office file types

In addition, several improvements were made in the latest version of eCapture (2019.6.2) including 1) the ability to auto-publish all documents to review, even those held back due to errors, 2) extracting additional metadata from photographs and PDF files, 3) the ability to convert

standard discovery to streaming discovery jobs to take advantage of the speed and more efficient workflow, 4) improved handling of documents with passwords, while driving down installation and upgrade times, making it possible to move to the latest version with minimal interruptions to business and down-time.

Finally, eCapture, the engine of Ipro for enterprise, has a robust roadmap, including work with our partners to continue developing secure public APIs—allowing partners full access to customize their workflows and take advantage of the power of eCapture.
