Technology is advancing every year, affecting all aspects of people's lives, career, and business. On the one hand, smartphones have taken over traditional ways of communicating and collaborating, and on the other, voice assistants, and smart speakers are allowing people to interact with their homes and retailers in a seamless way. Similarly, commercialization of 5G network and dominance of IoT networks and devices will force enterprises in considering investments in the internet of things operations. The list is just endless.

Cloud-based models have enabled higher access to digital technologies. These days companies no longer require in shouldering the risk to invest in complex technologies. Besides, cloud computing enables them in leveraging the expertise of several established technology startups. Its impact is most visible in artificial intelligence. Companies have begun to explore other emerging technologies, namely blockchain. Cost savings that are facilitated by the cloud are driving maximum spending on new technologies, including augmented reality, virtual reality, and robotics. The growing proportion of spending under new categories will open new rooms for business and growth avenues.
