Introduction

Global Android POS Market

Android, powered by Google, is the operating system designed for touchscreen devices such as smartphones and tablets. Android POS or Android Point of Sales system is a cloud-based system. It is an online platform that supports a smooth run for businesses of all type, such as retail, hospital, and others. It enhances the experience of business processes and transaction. It streamlines the accessibility of business from remote location, one-site, in a physical store, and on-web. This is the major benefit of Android POS that is expected to benefit its worldwide market.

There are other advantages that are offered by Android POS. Maintaining, recording, and tracking products sold and revenue generated from them is one of them. Other merits of the online platform are execution of sales operation, raising and calculating stock values, availability of inventory, and access customer database. These features give it a competitive edge over other online platforms, hence propel its market growth.

On the downside, the market can encounter resistance in expansion due to rise in cybersecurity threats and increase in risk of data breach.
