VIZpin Announces Partnership with Real Time Networks

VIZpin partners with Real Time Networks to offer smartphone credential option for key and asset management systems.

LANCASTER, PA, UNITED STATES, September 30, 2019 / EINPresswire.com/ -- VIZpin, designer and manufacturer of the VIZpin smartphone-based, Bluetooth enabled access entry system, has announced a partnership with Real Time Networks to provide access to their Key and Asset Management systems using VIZpin Smartphone Credentials.
The VIZpin integration allows customers with AssetTracer and KeyTracer solutions to have employees authenticate themselves with their smartphones to sign out keys and equipment. It also simplifies the process to give on-demand or temporary access to contractors, visitors and students. Using the VIZpin SMART app and Bluetooth reader/controllers, Real Time Network customers can instantly grant or revoke access to any of their systems and keep a record of who was there and when.

Paul Bodell, President and CEO of VIZpin said "We have a lot of interest from the markets that Real Time Networks is serving but the costs and challenge of adding VIZpin as an aftermarket product limited us. Now that we are fully integrated, the customer experience is seamless, convenient, secure and affordable."

VIZpin Smartphone Credentials

Mike French, CEO at Real Time Networks added "Adding VIZpin Smartphone Credentials to our systems adds a whole new level of security and convenience to managing temporary access in key markets for us like universities, office buildings and more. It also offers a lot of flexibility and affordability to our unattended delivery customers".

About VIZPin
VIZpin designs, manufactures and markets a complete access control solution that includes

cloud-based management tools (ACaaS), low-cost Bluetooth controllers and smartphone apps. The VIZpin solution provides a secure, convenient and affordable way to unlock any device by using your phone as your key and your network. Visit www.VIZpin.com to learn more.
