

Baby Alert International Inc. Introduces The Child Forgotten in Automobile Solution

Since 1998 835 Vehicular Pediatric Hyperthermia Deaths. Baby Alert International Inc. seeks to resolve this problem with their new ShareCare® Mobile Platform.

DALLAS, TEXAS, USA , October 1, 2019 /EINPresswire.com/ -- There's little, if anything, more important to most parents than the safety of their babies. This makes something like the undeniable statistics of how many babies die a year after being forgotten in an automobile something impossible to ignore. The question that presents itself is often how does one protect against this inadvertent danger, in a way that delivers real security and [peace of mind](#). The

leading developer of child seat safety monitors, [Baby Alert International Inc.](#), recently celebrated the launch of a new product, the [ShareCare®](#) Child Care Monitoring System, that allows parents and other child caregivers to make sure their child is safe even when not in their presence using a mobile platform. The enthusiasm surrounding the new release is high.

“

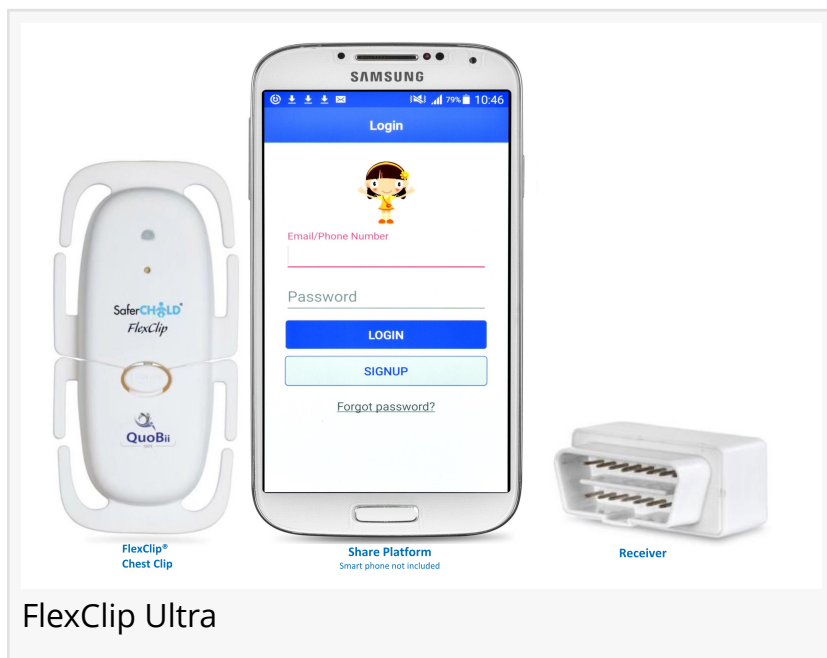

“Hypothetically speaking, the best prevention against a child being forgotten in a car would require multiple caregivers accompanying the child whenever the child was in an automobile. However, prior”

Addison Wel

“When we see the statistics like every 10 seconds a child is unattended within an automobile, or learn that since 1998 835 children have died of vehicular pediatric hyperthermia, and that during the summer months a child dies every 2.5 days from hyperthermia while unattended in an automobile it is extremely disturbing,” commented a spokesperson from Baby Alert International Inc. “Our company is in the position to provide the necessary tools and resources to help protect babies from these tragedies, which is exactly what our new products address.”

Dr. David Diamond, Professor of Psychology, University of South Florida, remarked, “Any person is capable of forgetting a child in a car under circumstances where a parent is going through an (autonomous) routine and the child is in the backseat ...”

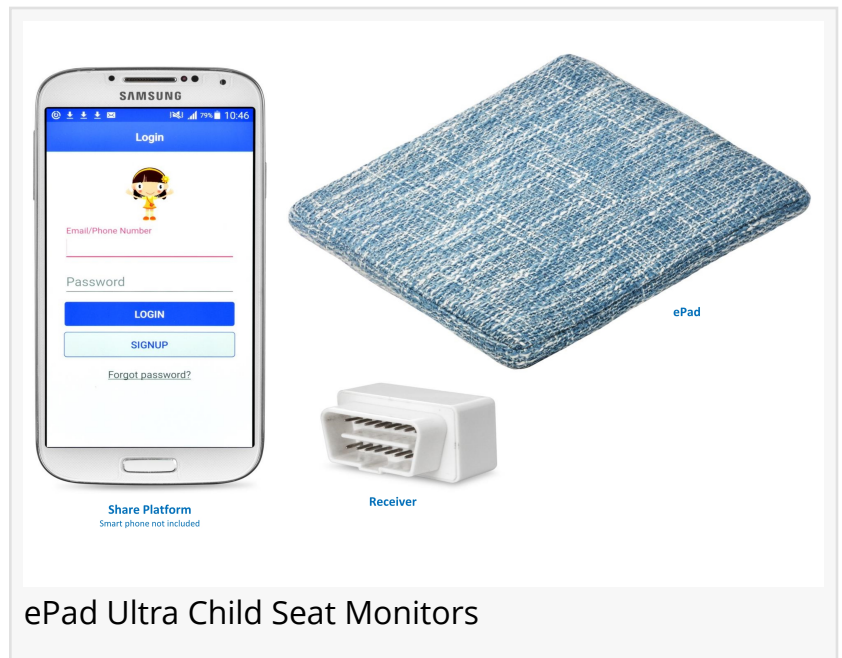

Addison Wel, BAI GM, added, about the value of the ShareCare® product, “Hypothetically speaking, the best prevention against a child being forgotten in a car would require multiple caregivers accompanying the child whenever the child was in an automobile. However, prior to today this was not practical.”

With childcare responsibilities being spread across more than one person, the ShareCare® Platform addressing this in a smart way to help keep children safe. By combining high tech hardware with sophisticated algorithms and a smart AI mobile platform the results is the industry's first child seat safety monitor to support multiple caregivers collectively managing the child's safety automatically whenever the child is in an automobile. No matter who is driving a parent will know if their baby is safe.

This protection can be invaluable since a baby is almost always unintentionally left behind in cars.
