

# Global Waste Water Treatment Chemicals: Market Analysis, Strategies, Segmentation And Forecasts 2019 To 2025

*Wiseguyreports.Com Adds "Waste Water Treatment Chemicals – Global Market Growth, Opportunities, Analysis Of Top Key Players And Forecast To 2025"*

PUNE, MAHARASTRA, INDIA, October 1, 2019 /EINPresswire.com/ -- The Need For Industrial-Use Water Will Promote The Growth Of The Global [Waste Water Treatment Chemicals](#) Market 2019

## Market Overview:

There is a dire need for water globally at present. Apart from water used for drinking and cooking, there are so many areas where water is used for non-edible purposes. Gardens, manufacturing sectors, industries, and plants all require water for everyday functioning. With the demand for pure drinking water, using fresh water sources for these industrial applications is a waste of the resource. This is why most industries use treated water for their manufacturing purposes.

Used water from different sources undergo extensive processes or treatments and harmful and odor causing elements in the water are removed. The water is then sent out to different application areas and is reused. Waste water treatment chemicals are products that are used in the cleansing process. The common application areas that benefit from the processed waste water are mining, construction, pharmaceuticals, paper manufacturing industries, textile mills, and oil and gas industries.

Depending on the end-result required and the type of water, there are different kinds of chemicals that are used. This report identifies the types of chemicals available in the market and analyzes their demand at present and in the future. The global waste water treatment chemicals market is looked at the global, regional, and individual player level by this report. The report also analyzes the historical data of this industry and uses it along with primary and secondary research to forecast the growth of this market.

The following manufacturers are covered:

Kemira  
DuPont  
Arkema  
BASF  
GE Water&Process Technologies  
SNF Group  
Ashland Corporation  
Chemifloc  
Kurita  
AkzoNobel  
The Dow Chemical  
Baw Water Additives  
Ecolab  
Lonza Group

#### Market Segmentation:

There are four major types of waste water treatment chemicals that the market manufactures and sells. They are corrosion and scale inhibitors, coagulants and flocculants, biocides and disinfectants, and PH adjusters. All four types and their demand and supply details are analyzed by this report. Depending on the applications, the report considers four major areas of usage. Power generation, municipal waste treatment, industrial waste treatment, and oil and gas sector are all investigated. The current and potential demand for these chemicals and the revenues generated by these usage areas are all studied and results are published by the report.

#### Regional Analysis:

Major regions like North America, Asia Pacific, Europe, Southeast Asia, China, Japan, and India are all included in this report. North America, especially the United States, leads the market when it comes to using waste water treatment chemicals to recycle water. The large numbers of industries and manufacturing sector here have boosted the demand. Countries like China and India will see fast growth in this industry in the future. Rapid industrialization and the high population density will both ensure there is ample demand for treated waste water.

#### Industry News:

Harare is the capital of Zimbabwe and on September 23rd, 2019, the local authority there shut off its waterworks because of the shortage of water treating chemicals. This waterworks supplies water to more than 2 million people around and this was considered a health disaster by the country. The shortage of these chemicals was attributed to foreign currency constraints.
