Growth by Region

Europe accounts for the largest share of the global market for Parkinson's disease treatments, followed by North America. Both the regions have high level of awareness regarding the diseases' treatments, and also a high prevalence of the disease. The factors like favourable medical reimbursements regulations, rapidly growing elderly population, expenditure in R&D, and promising clinical products have contributed in their domination of the market.

In Asia Pacific, a major share of the market is captured by China and Japan. This is owing to the large population of old people which are affected with the disease. LAMEA is anticipated to exhibit high growth rates, with Brazil accounting for a major industry share with increasing prevalence of Parkinson's disease.

Drivers vs Constraints

The major market drivers are the growth in the aging population, with it the associated increase in the chance of occurrence of the disease, developments and enhancements of the current treatments and the combinations of such, growing R&D expenditures and a number of medicines in the pipeline. High expenditure of treatment and short of proficiency for early diagnosis are some of the factors that are anticipated to curtail the market development.

Industry Trends and Updates

In July 2018, GSK and 23andMe announced a four year collaboration that will focus on R&D of innovative new medicines and potential cures, using human genetics as the basis for its discovery.

In July 2018, Herantis Pharma launched a new programme for the development of non- invasive cerebral dopamine neurotrophic factor (CDNF). This is a modification of natural CDNF which will broaden the application of CDNF in the treatment of Parkinson's disease.

In January 2018, Pfizer announced that it is ending research to discover new medications for Alzheimer's and Parkinson's diseases. This step was taken by considering the high cost involved.
