

# TurnKey Internet Launches New Data Center and Colocation Management Tools

---

*Leading Data Center and Cloud Hosting Solutions provider TurnKey Internet announced that they have added EasyDCIM to their extensive list of hosting features.*

LATHAM, NY, UNITED STATES, October 22, 2019 /EINPresswire.com/ -- Leading Data Center and Cloud Hosting Solutions provider TurnKey Internet, Inc. announced today that they have launched and added EasyDCIM - the complete solution for Data Center and Colocation Management, to their extensive list of hosting features. The integration is a free upgrade for all of TurnKey's dedicated server and colocation clients.

By revolutionizing and streamlining the entire server provisioning process together with providing complete management tools, EasyDCIM closes the gap between cloud and dedicated servers. It offers TurnKey's clients automated Operating System installations, network graphs, improved Remote Reboots, as well as Direct Console Access.

Common operating systems like CentOS, Ubuntu, and Windows Server editions as well as rescue mode options and recovery tools will be available to TurnKey's clients at the click of a button. Dedicated Servers will now have historical network graphs, so clients can keep an eye on their bandwidth usage directly in their Client Area.

Improved remote reboot functionality for immediate power cycling of any downed or unresponsive servers, has also been integrated automatically. Clients with servers featuring iDRAC or IPMI, will have direct access to these remote management tools from inside their Client Area, removing the need to remember separate IP addresses for access.

"We pride ourselves on providing our customers with the best available data center tools and technology," said Adam Wills, President and CEO of TurnKey Internet. "We hope our customers enjoy using these new features as much as our team enjoyed implementing them."
