[Healthcare Chatbots Market 2019](#)

Description: -

Chatbots are computer programs and the application of artificial intelligence. It conducts conversations via textual or auditory methods. The computer programs are designed in such a way that they can understand human behavioral patterns from the inputs. Chatbots are getting more popularity along with time owing to its diverse application. Chatbots are used in different industries. Industries like information acquisition and customer services adopted chatbots from its inception. It reduces the workload of the employees and gives better customer satisfaction. Most of the chatbots are used to initiate a conversation. Most of the chatbots are simple in nature, and they can scan the keywords from the given input and replay with the most matching keywords from the database. Healthcare Chatbots are specialized in the healthcare segment. These are mostly adopted by institutions related to health to provide efficient and 24X7 services to the customers.

The global segmentation of Healthcare Chatbots includes regions like North America, Latin & Central America, Europe, the Indo Pacific, and the Middle East and Africa region.

Some of the focused countries are Uruguay, Argentina, Israel, Germany, Japan, Brazil, South Korea, Mexico, Canada, the USA, The UK, France, China, India, Australia, and ASIAN countries. Europe is leading the market share in the global level. The forecast expects the European region to grow significantly during the forecast period. The Indo Pacific region is expected to show the most abundant compound annual growth rate (CAGR) during the forecast period owing to the excellent adaptation of IT in the area.

Recent Happenings from the Global Healthcare Chatbots Market

A Russian tech company called Endurance developed chatbots for Dementia patients. As Dementia disease progress in the body, the patient loses its conversational abilities. The chatbot supports a cloud-based solution. As a result, one can review the conversation of the patient. Interestingly, the project is open-source, so anyone potentially contributes to the development of the codebase. The project is still in its initial stage, but the vibrant concept can help many patients, doctors, and scientist communities in the near future.
