

Global Plastic Coating Market 2019 Industry Analysis, Opportunities, Segmentation & Forecast To 2025

Wiseguyreports.Com Adds "Plastic Coating – Global Market Growth, Opportunities, Analysis Of Top Key Players And Forecast To 2025" To Its Research Database.

PUNE, MAHARASTRA, INDIA, October 23, 2019 /EINPresswire.com/ -- Global [Plastic Coating](#) Market 2019-2025

Market Overview:

Plastic coating involves the application of a layer of the plastic/polymer onto a substrate. Different formulations can be used that include radiation-curable, organic solventborne, powder, and waterborne formulations. Contour coating of a material refers to the application of a plastic coating to 3 dimensional models either by spraying the coating over the material or by dipping it into the plastic coating and then allowing it to harden and form a protective layer. Some of the polymer coatings are designed to be very durable and tough but at the same time to also be flexible.

The plastic coatings can be used to protect different materials or can even be used for decorative purposes. All plastic coatings are generally organic but depending on the application whether durability is required or aesthetic qualities are to be increased ceramic and metal particles may be added to it. As plastic coatings are relatively expensive the layer used to coat the material is often very thin. The normal thickness of a layer can vary from 1 micrometer to 100 micrometres in thickness.

The report published on the global plastic coating market provides an overview of the industry while also segmenting the plastic coating market into various categories. Recent developments in the plastic coating industry as well as the expansion plans of various manufacturers are discussed in detail in the report. New technologies that can be used to increase market production are also focused on. The overall market revenue and production of the global plastic coating market from the year 2014 to the year 2025 are forecast and analyzed.

The following manufacturers are covered:

Akzonobel
BASF
PPG Industries
3M
Kansai Paint
Diamond Vogel
Wacker Chemie
Bayer
Eastman
Valspar
Axalta Coating Systems
AkzoNobel
Nippon

If you have any special requirements, please let us know and we will offer you the report as you want.

Market Segmentation:

The global plastic coating market can be divided into different market segments according to the different types of plastics that are used to coat the products and the different applications that plastic coatings have in the current market.

Market split based on type:

Acrylic: Coatings that utilize acrylic resin.

Polyurethane: A layer of polyurethane is applied to a product to protect it.

Epoxy: Consists of two parts, an epoxy resin and hardener, which are mixed before the application.

The global plastic coating market split based on the applications: Based on the different industries that utilize plastic coatings for a variety of applications they can be split into:

- Aerospace and defense
- Automotive
- Medical
- Building and construction

Regional Analysis:

Based on the various regions around the globe, the report on the global plastic coating market categorizes the import, export, consumption, and the production in India, Southeast Asia, Japan, China, Europe and North America. A market analysis of the global plastic coating industry is carried out for the various regions included in the report and the results are presented in the report. From the year 2014 to the year 2019 an analysis of the market based on the different types of coatings available, the various applications it is used in, the different regions covered and the top manufacturers from around the globe in the industry is carried out.

Industry News:

A supermarket in the United Kingdom is going to become the first one in the region to try a new invisible food-coating technology which is derived from plants and is water-based. Asda which is the supermarket says that the new technology can reduce the plastic waste generated while at the same time prolonging the amount of time that particular products can stay on the shelves.
