PUNE, INDIA, November 6, 2019 /EINPresswire.com/ -- Overview

The Mint is an aromatic plant that provides us with a sweetly scented aroma along with a different taste. The Mint belongs to the family of several culinary herbs and is found in the regions of temperate climatic areas of the old world. Mint Flavors are a byproduct of the plant of Mentha, which is a member of the Lamiaceae family with the characteristics of being a genus of plant.

The complete classification between species of the plants is still unclear as there is an estimation of a large variety of species that ranges between 13 to 24 types. In the case of the Mint plants, a large number of hybridization is also done, but in some plants, it happens in a natural process, and shreds of evidence of some plants overlapping the species range are also encountered.
