## Key Players

The report covers a broad study of the competitive scenario of the Anemometer market and the current trends that are expected to impact the market. It identifies vital market players of the market, comprising of both key and emerging players. The report consists of the corporations in the market share study to offer a more comprehensive overview of the key market players. Furthermore, the report also contains significant strategic developments of the market, such as new product launch, acquisitions & mergers, partnerships, agreements, research and development collaborations, and joint ventures, along with notable growth policies of key market players on a regional and global basis.

The main purpose of an anemometer is to measure the average, minimum, and maximum wind speeds in terms of wind turbulence at a particular site. Anemometers are put at different heights over a mast, which is useful in providing wind shear information like the difference in wind speeds at different heights. They also give information about the direction of wind speed. Ultrasonic devices that are built in wind direction monitors are used for the detection of wind direction. The anemometer, wind vane equipment and pole are referred to as a meteorological mast or otherwise met mast. The information about speed and direction of wind is collected by a data logger and analyzed by a computer software.

## Demand Scenario

The global anemometer was USD 347.92 million by 2018 and is estimated to reach USD 510.49 million by 2025 at a CAGR of 5.63% during the forecast period

## Growth by Region

North America accounted for largest market share in 2018, followed by Europe and Asia Pacific. The APAC Region will have the highest growth rate throughout the forecasted period which is due to increased need for power for developing electrification infrastructure, and enhanced focus towards renewable energy.

## Drivers vs. Constraints

Factors leading to the growth of market are supportive regulatory policies for Wind Energy Projects, innovation of digital and smaller wind anemometers, rise in offshore installations. However, restraining factors are competition from fossil fuels, harsh environment conditions (like humidity and cold conditions), high Capital investment and design complexities.
