

Biogas Technology Market 2019: Global Trends, Market Share, Industry Size, Growth, Opportunities, Forecast to 2025

This report covers market characteristics, size and growth, segmentation, regional breakdowns, competitive landscape, market shares, trends and strategies

PUNE, INDIA, November 15, 2019 /EINPresswire.com/ -- Biogas is mainly a kind of biofuel which naturally made by decomposing various organic waste. The technology of extracting biogas is known as Biogas Technology. Organic matters such as food scraps, animal wastes when decomposing in an anaerobic environment it releases blend of gases methane and carbon dioxide and as the decomposition process takes place in the anaerobic environment, this process of producing the biogas is popularly known as the anaerobic digestion. It is considered environment-friendly since it helps in lowering the emission of harmful gases which causes global warming.

Biogas Technology involves the process of converting organic waste into energy and biogas is using the natural method of recycling substances into various productive resources. The process mainly recovers the different types of waste materials that can create massive pollution on the land, prevents using of hazardous chemicals in the sewage treatment plants, helps in saving money, material as well as energy simply by treating waste on-site. Also, technology doesn't need fossil fuel extraction for producing energy. Through the process of this technology, the methane content of the decomposed waste is converted into carbon dioxide.

Due to its lots of benefits, Biogas Technology is mostly accepted worldwide since it is a clear source of energy. The gas coming from biodigestion doesn't cause any pollution and even reduces the emission of the greenhouse gases in the atmosphere. This means that using biogas is eventually a good option to prevent the problems of global warming. Apart from just the prevention of greenhouse gas emission, using biogas helps in improving the water quality since the landfills heavily pollute the underground water resources. Furthermore, it also reduces the chances of spreading various waterborne diseases.

The key manufacturers covered in this report:

2G Energy AG
Chinese Academy of Agricultural Mechanization Sciences
AAT Biogas Technology
AcrEnergy
Agraferm GmbH
AB Energy SpA
Bright Biomethane
Asia Biogas Co. Ltd.
CCI Bioenergy
Ambient Energy LLC
MannTek AB

Stream BioEnergy
New Eco-tec Verfahrenstechnik
Eggersmann Gruppe GmbH&Co.KG
Fraunhofer UMSICHT
Entec Biogas GmbH
Pyreg GmbH
Hitachi Zosen INOVA AG
Eliopig S.r.l.
Renecon Energy

Market segmentation

The organic waste market has been foreseen to rise due to the rise in the target of an increase in the production of the biogas from different types of biodegradable plants which is a part of the Biogas Technology. Utilizing strict environmental regulation with rising penetration of renewable technology for producing electricity helps in influencing technology adoption. Continuous rise in the per capita income, as well as the rise in the population growth, has increased the chances of generating waste. Using Biogas Technology to a certain extent helps in reducing these problems. The worldwide market of the biogas that followed pre-hydrolysis technology in the year 2018 reached a value of USD 50 billion, and in the future, it can rise in the upcoming year of 2025. Energy recovery, minimal production of biosolids as well as low costs is a few factors which support the adoption of pre-hydrolysis technology. Additionally, the rising demand for sludge stabilization helps in further augmentation of the business growth over the forecast timeline also is a part of Biogas Technology.

When it comes to the geographical segmentation of the global market of Biogas Technology then North America is foreseen to grow due to the ongoing technology, declining costs and innovations. The biogas market in Europe will also grow by the year 20125.
