Introduction

Global Allergy Treatment Market

An allergy is the response of the immune system towards the foreign substances that are not harmful to the body. The foreign substances that are not typically harmful to our body are called the allergens. These allergens are foods that include specific types of foods, pollen, and pet dander. The job of the immune system is for keeping the body healthy by fighting with the harmful pathogens.

The allergies can be of several types that include the allergies of eye, asthma, Rhinitis, skin allergy, and various others. As per the reports of the World Allergy Organization, the approximation of 30 – 40% of the total population of the world is affected by some allergy in the year 2011. The severe allergies can be a threatening to life in the case of some patients as the severity of the allergy reduces the organ functions that include the examples like the poor functioning of the lungs due to asthma allergic.

The primary symptoms of the reactions generating from the allergies include the conditions like the roof of the mouth, itching in the nose, eyes, or throat in addition to the sneezing, teary eyes, stuffy nose, congestion, and many others. In addition, food allergies also create symptoms like diarrhea, vomiting, or the symptoms related to the respiratory system, after the ingestion of an allergen. According to the World Health Organization or commonly known as the WHO, allergies are recorded as the fourth largest global condition of pathology after cancer, AIDS, and cardiovascular diseases.
