Clinical decision support systems (CDSS) are computer-based programs that are used to analyze the patient data in order to assist the hospitals, clinics, and ambulatory care centers. CDSS analyses the data from EHRs to assist the physicians by providing the prompts and reminders about the patients and their medication. Clinical decision support systems (CDSS) helps the healthcare providers to implement the evidence-based clinical guidelines at the point of care. For instance, Alzheimer prevention, CDSS can be used to facilitate care in various ways, by reminding physicians to check for Alzheimer risk factors, highlighting the cases of high blood pressure, drug dosage timing, and providing customized dosage.

The clinical decision support systems market is segmented on the basis of component, delivery mode, application and end user. Based on the component the market is classified as software, services, and hardware. On the basis of delivery mode, the market is divided into on premise, cloud-based, and web based. On the basis of application, the market is categorized as drug-drug interactions, drug allergy alerts, clinical reminders, clinical guidelines and others.
