Description

Titanium powder mainly has three types, which include high purity titanium powder (CPTP) and alloyed titanium powder (ATP). And each type has application industries relatively. With growth of powder metallurgy, the downstream application industries will need more titanium powder. So, titanium powder has a huge market potential in the future.

The major raw materials for titanium powder are titanium sponge, H₂, titanium tetrachloride (TiCl₄) and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of titanium powder. The production cost of titanium powder is also an important factor which could impact the price of titanium powder.

Titanium powder is the result of processing this metal in a variety of ways to produce a fine metal powder. A silvery metal, titanium is highly valued for its great strength and unmatched corrosion resistance. It is widely used in aerospace industry, automobile industry, petrochemical industry etc.

At company level, this report focuses on the production capacity, ex-factory price, revenue and market share for each manufacturer covered in this report.
