Calcium Tartrate is used as a stabilizing, anti-caking, and preservative agent. It finds primary usage in seafood, confectionery products, fruits and vegetables, bakery items, and deodorization of fish. It can also be used as an acidity regulator. With the increase in the consumption of packaged food items, the demand for calcium tartrate has also increased. The growth in the Calcium tartrate market is a result of growing awareness and demand for healthier additives to food.

Sodium propionate is expected to give stiff competition to calcium tartrate and poses a challenge to the industry. Further, the market can also experience hurdles with the introduction of stringent guidelines for food safety.

### Segmentation

This report segments the calcium tartrate market based on its type, which is:

Industrial grade

Food grade; and

Pharmaceutical grade (as an antacid).

Additionally, based on the application, the sector can also be categorized into the food industry, wine industry, and pharmaceutical industry.

### Regional Analysis

The following geographical regions were analyzed:

North America  
Europe  
China  
Japan  
Southeast Asia  
India

Among the regions studied, the North American calcium tartrate market is expected to grow at a healthy rate. However, the unprecedented forecast regarding the food safety rules and regulations may affect this growth. On the other hand, the market for the Asia-Pacific region, especially India and China, is estimated to grow at a fast pace.

### Industry News

Recent studies indicate that the usage of sodium, calcium, and potassium-based salts as preservatives have an adverse effect on health. It is believed that long-term exposure to such chemicals could cause anything ranging from urticaria and dermatitis to stomach cancer. This report caused a flurry among the general public and governments are gearing up to introduce stricter measures to curb the usage of unhealthy preservatives.
