Market Overview:

Alkyl (C12-C14) Glycidyl Ether is a form of an organic compound which is used extensively in chemical, industrial and construction. The major usage is defined as for polymerization processes as an industrial grade monomer, used as sealant in construction related material and as an adhesive for various purposes. It is logically a by product of a condensation reaction between glycidol and allyl alcohol. They are reacted with an ether process linkage. Because of the presence of both epoxide and an alkene, they can be manipulated to react separately in a group while maintaining the other processes intact.
