Easy in Data Management of Records to Propel Global Market

The market for CMMS or computerized maintenance management system software is expected to rise owing to the augmenting need among organisations to reduce manual maintenance operations such as record keeping. CMMS software is used in organisations to store important information related to the maintenance operations, tracking orders, inventory management, external activity request, auditing, registering asset history and certification, and scheduling activities.

This software provides ease in management of data tracking and record keeping to bring efficiency at a very cost-effective and timely manner. Companies have included it in their day-to-day functions to have better control over organisation's maintenance and data management. Additionally, the data generated from this software can also be used for the verification of regulatory compliance and help reduce the amount of effort and time required for manually record keeping, thus saving time and reducing labour costs.

Cloud-based CMMS Software Segment to Grow Drastically in Market

The cloud-based CMMS software segment is expected to grow drastically due to its various

advantages such as flexibility, reliability, security, and elimination of the hassle of maintaining and updating systems.

North America to Dominate with High Adoption Rate

North America is expected to be the dominant player in the global market due to increasing adoption of CMMS among companies and presence of top CMMS providers.

Manufacturers to Focus on Streamlining Work Facilities

Dude Solutions has introduced a Space Management module to their CMMS, TheWorxHub. The new space management module will bring evolution to healthcare and senior living facilities. The new module delivers ease and efficiency in the facilities such as streamline work with the help of space utilization tools, visual interior maps, and configurable layers to enhance its functionality in hospitals and senior living communities.
